Education

Oregon State University GPA: 3.8

B.S. Computer Science *Sep 2024 – June 2028*

Relevant Coursework: Database Management Systems, Analysis of Algorithms, Web Development, Usability Engineering, Operating Systems, Software Engineering, Data Structures, Computer Architecture and Assembly

Technical Skills

Languages: C++, C, Python, HTML, JavaScript, CSS, Assembly (ASM), SQL, PHP
Libraries/Frameworks: Bootstrap, Node.js, React, Tailwind, CustomTKinter, Janus, Numpy, Swagger, Wiremock, Axios
Developer Tools: Linux, Git, GitHub, Visual Studio Code, Geany, MobaXterm, AWS, Microsoft Report Builder, WSL Ubuntu, Docker

Projects

Adaptive AI Code Assistant for IBM COBOL Modernization | Sept 2026 – June 2027

- Developed an intuitive frontend design to coordinate asynchronous AI outputs and retrieval streams within agentic workflows.
- Enhanced accessibility and UX by building responsive, navigable interfaces that adapt to diverse cognitive learning styles and cultures.
- Collaborated on a retrieval-augmented pipeline and designed frontend components to present adaptive explanations for COBOL code comprehension across diverse learning styles.

Peoplesoft API for IIA | *VSCode, Docker, WSL Ubuntu, Swagger, Wiremock, Axios, React* Apr – Sept 2026

- Developed an API integration between RADAR and PeopleSoft to send invoice information while maintaining security through secure RADAR authentication, multi-stage validation checks, and constructing a hash map to group invoices before transformation.
- Constructed JSON payloads routed through a custom router and controller to enable seamless delivery on an existing codebase with modular reusable components for validation, grouping, and error handling while maintaining current workflows on the codebase.

MLR (Medical Loss Ratio) Business Segment Tool | *LaTeX, Typescript, JSON, Python* May – Jul 2025

- Provided clear documentation explaining how to deploy the tool for other workers with no knowledge of the program to ease up testing processes.
- Worked around the company artifactory to ensure the program had no security vulnerabilities and all node packages were up to date.

Experience

Software Developer Intern March 2026 – Present

Cambia Health Solutions Software Development Intern *Portland, OR*

- Implemented SQL-driven reports to organize funds into structured summary tables to ensure a smooth transition for a newly added state.
- Produced documentation for deploying a codebase that consolidates group-size values from multiple data sources for MLR filing.
- Architected and shipped a custom API integrating two services which allowed them to send/receive data to one another, alongside Powershell scripts and Circle CI processes which streamlined testing.
- Kept code up to date by both identifying and reducing 10+ major security vulnerabilities into zero.

Front Desk Support Nov 2025 – Present

Oregon State University, FRC Office Aide *Corvallis, OR*

- Diagnosed and resolved recurring printer and Excel issues for coworkers, minimizing workflow disruptions.
- Remediated and maintained branch website to WCAG 2.2 standards and educated fellow team members on accessibility protocols.
- Provided instructions for 4 new on-boarding workers on connecting their accounts to the shared drive and Outlook.
